### ADSD HW7 TinyDB ToDo

I use TinyDB CRUD both on local and pythonanywhere, to keep original peewee ORM working, I changed all TinyDB related request method.

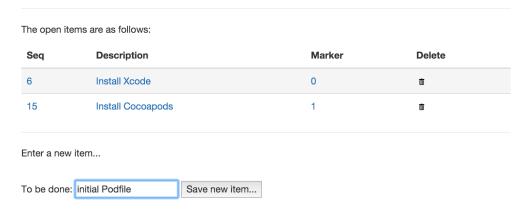

### Pythonanywhere:

#### Create:

## **Model List View**

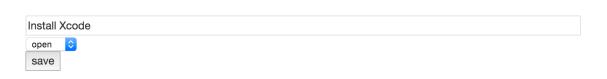

### The open items are as follows(Model List):

### Update:

# Edit the task with ID = 6

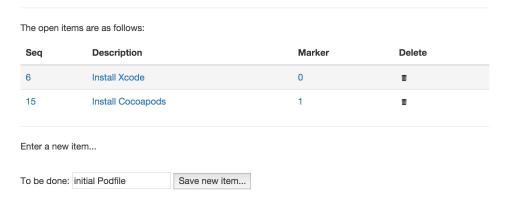

### Read:

## **Model List View**

# The open items are as follows(Model List):

### Delete:

Delete the task with ID = 6

Task to delete:

#### **Install Xcode**

Confirm deletion...

Code:

```
#tinyDB
26
27
28
       @route('/tinydb')
       @route('/tinydb/<statis:int>')
29
30
       def tinydb(status=-1):
31
            items = tiny_get_items(status)
32
            result = []
33
            for item in items:
                result.append((item['id'],item['task'],item['status']))
34
            return template('tinydb', rows=result)
35
36
37
       @get('/tinydb/new')
38
       def get_new():
            return ''
39
10
                Enter a new item...<br/>
11
                <form action="/tinydb/new" method="post">
                    To be done: <input name="task" type="text" />
12
                    <input value="Save" type="submit" />
13
14
                </form
15
16
       @post('/tinydb/new')
17
       def post_new():
            task = request.forms.get('task', '').strip()
18
19
            tiny_new_item(task,1)
            return tinydb()
50
51
52
       @get('/tinydb/edit/<id:int>')
53
       def get_edit(id):
54
            item = tiny_get_item(id)
55
            return template('tinydb_edit', id=id, task=item['task'], status=item['status'])
66
57
       @post('/tinydb/edit/<id:int>')
       def post_edit(id):
58
            task = request.forms.get('task', '').strip()
59
50
            status = request.GET.get('status','').strip()
51
            if status == 'open':
52
                status = 1
53
            else:
54
                status = 0
55
            item = tiny_get_item(id)
            item['task'] = task
6
            item['status'] = status
57
            tiny_save_item(item)
8
59
            return tinydb()
10
       @get('/tinydb/delete/<id:int>')
11
12
       def confirm delete item(id):
73
            item = tiny get item(id)
14
            return template('tinydb_delete_view', id=id, task=item['task'], status=item['status'])
75
76
       @post('/tinydb/delete/<id:int>')
17
       def delete_item(id):
78
            tiny_discard_item(id)
79
            return tinydb()
```
