List Model Code:

```python
from bottle import default_app, run, route, get, post, request, template, static_file

if __name__ == "__main__":
    HOME = "./"
else:
    HOME = "/home/ChangCode/mysite/"

import sqlite3
from peewee import *

database = SqliteDatabase(HOME+'todo.db')
```

Show usages of variable 'database'

```python
    class Meta
        database = database

class Todo(BaseModel):
    status = BooleanField()
    task = CharField()

    class Meta:
        db_table = 'todo'

@route('/model')
def model_list():
    query = Todo.select().where(Todo.status).order_by(Todo.task.asc())

    result = []

    for todo in query:
        result.append((todo.id,todo.task,todo.status))

    output = template('model_list_view', rows=result)
    return output
```
